#### **Foard Panel's Warranty Requires Mechanical Ventilation to Maintain Safe Indoor Air Quality and Humidity**

A Heat Recovery Ventilation System replaces stale air from the inside with fresh air from the outside. This system recovers heat and sends it back into your home with fresh air. This process reduces heat loss and saves energy.

Ventilation also helps control indoor humidity in order to prevent excessive condensation which can lead to serious problems such as staining and mold.

#### **Recommended Air Changes Per Hour**

35 to .5 ACH (air changes per hour) is recommended by experts including the American Lung Association and ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers)
